Setup:

Place each item in order (see photo below)

Tripod

Large Pelican Case

Pelican Storm Case

Vehicle

Open the Large Pelican Case and remove the PTZ Camera. Place the camera on the Post & Sleeve assembly of the tripod. Tighten the wing nut securely.

Connect the PTZ Cable to the PTZ Camera. Remove the X3 Nano DVR and the PTZ Controller.

Connect the PTZ control cables to the 2-way splitter and plug it into the DVR.

Following the labels in each power cable, begin plugging in each peripheral.

Plug the standard power cord from the Pelican Storm case into the external plug on the right-hand side of the large Pelican case.

Connect the Power inverter Quick Connect Cables onto the battery terminals making sure the Positive and Negative do not touch once connected.

Turn the power on by pressing the button on the front of the UPS in the Pelican Storm Case. A blue light will indicate that the system is turned on.

To control the DVR, use the touch interface on the monitor. Be sure to have the USB and VGA connected before you power up the system or the touch interface will not initiate. Alternatively, a USB mouse (not included) can be used to control the DVR.
